

EASY Application of Traction Plus Pro Anti-Slip Solution

1	Clean the area to be treated as you normally would, being sure that all dust is removed from the surface. Traction Plus Pro also cleans, so that deep cleaning is not necessary.
2	Pour the appropriate amount of Traction Plus Pro for your surface area into A CLEAN BUCKET.
3	How much Traction Plus Pro you will need to cover your floor surface. Each litre of Traction Plus Pro will cover approximately 2-4.5 square meters of flooring, depending on saturation and floor type.
4	Soak a CLEAN mop or sponge in Traction Plus Pro Anti-Slip Solution. A sponge mop or cloth mop may be used. No gloves or special tools are necessary. Traction Plus Pro has less acidity than ordinary vinegar.
5	Apply Traction Plus Pro to the surface being treated; make sure to keep the surface wet and cover entire surface, including grout.
6	Cover only the area of the floor surface that can be covered and remain wet, while you are working. For best results, agitate the treated surface with a brush or deck broom to work Traction Plus Pro into pores of surface. Repeat this agitation every 7-8 minutes that you leave Traction Plus Pro on the floor. Make sure that surface remains totally wet.
7	While Traction Plus Pro is working, thoroughly rinse Traction Plus Pro from the mop or sponge, and fill another pail with clean water. It is recommended to use two pails, one to apply Traction Plus and the other for clean water.
8	Beginning with the first area where Traction Plus Pro has been applied, rinse thoroughly. Use plenty of clean water ; be certain to soak the entire area. There may be a slight foamy residue left after application, be sure to remove all residue with clean water.
9	The surface is now treated with Traction Plus Pro Anti-Slip Solution. Clean the surface periodically with a clean mop, as normally would be done. DO NOT WAX surface. Wax will fill in the microscopic treads and reduce the effectiveness.

Other Areas Where Traction Plus May be Used

PLEASE NOTE: Different application procedures will apply.

1. Untreated wood flooring.
2. Tarmac or asphalt.
